

What is Wappalyzer?

Wappalyzer is a popular tool for **identifying the technology stack** of websites. It detects things like:

- CMS (e.g., WordPress, Shopify)
- Web frameworks (e.g., React, Laravel)
- Servers (e.g., Nginx, Apache)
- Analytics (e.g., Google Analytics)
- JavaScript libraries, payment processors, CDNs, and hundreds more categories.

It's widely used for competitor research, sales prospecting, security reconnaissance, and development inspiration. As of 2026, the official Wappalyzer is primarily a **browser extension** and **SaaS platform** (with paid APIs and lead generation features), but there are open-source forks and CLI options.
